

We´re changing our product structure – INTEGRA-pw remains INTEGRA-pw but more specialized

Product specialization (greater product depth) / greater product transparency

The steel mesh mat and fastening sets will be listed separately in the future, allowing for an optimal solution to be generated for every requirement from a modular system. Different combinations of the steel mesh mat and fastening sets result in different products, necessitating changes to product names:

Closing INTEGRA-pw becomes	INTEGRA-pw LOCK – closing, Entry protection, basic for greening
Pedestrian barrier INTEGRA-pw becomes	INTEGRA-pw 0.1 – personnel loads, 0.1 t
Car safety barrier INTEGRA-pw becomes	INTEGRA-pw 2.5 – vehicles up to 2.5 t (EU, GB, AT, CH) INTEGRA-pw 3.0 – vehicles up to 3.0 t (Germany)
Car safety barrier INTEGRA-pw RD becomes	INTEGRA-pw 3.5 – vehicles up to bis 3.5 t
Car safety barrier INTEGRA-pw X-Long becomes	INTEGRA-pw X-LONG – support-free spans up to 7.8 m, vehicles up to 3.0 t

Price transparency

The length categories with different prices are no longer applicable. This results in more transparent prices for steel mesh mats and fastening sets. Our quotations are simplified and shorter:

Fastening sets and additional items are shown separately in the quotation but are cumulated in the individual price per running meter.

The component specification position is new:

This position provides documents such as the respective certificate and data sheets that define the product and prove the impact loads.

Data sheets

Data sheets have been adapted to reflect the new detailed product structure.
